sap business one cloud full performance

full add-on functionality

Your customers' special requirements can be now fulfilled. All SAP Business One add-ons are compatible with Clouディア either in a cloud or in a hosting environment.

full local office integration

SAP Business One cloud can be connected directly to your local Microsoft Office. This advantage is only available by Clouディア.

fully customizable

Clouディア is not a closed package. You can customize it to each customer's requirement individually. You can run it on Clouディア if it runs on premise.

full html5 & rdp access

Clouディア works without limits directly on your browser or RDP (Remote Desktop Protocol). The special Clouディア HTML5 client has no limitations on SAP Business One functionality. You can work anywhere, at any time and on any device.

fully managed

You have more time for your happy hour! Clouディア gives you a fully managed service including security, backups, system updates, installed applications, etc.

full sql & hana

It doesn't matter if your database is Microsoft SQL or SAP HANA. The Clouディア servers are customized for both of them.

full flexibility

You can add your servers, databases and services in to the Clouディア environment. We adjust our platform to the needs of each of your customers.

less pain

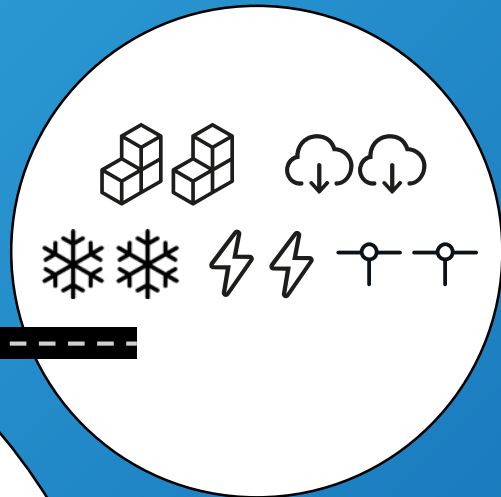

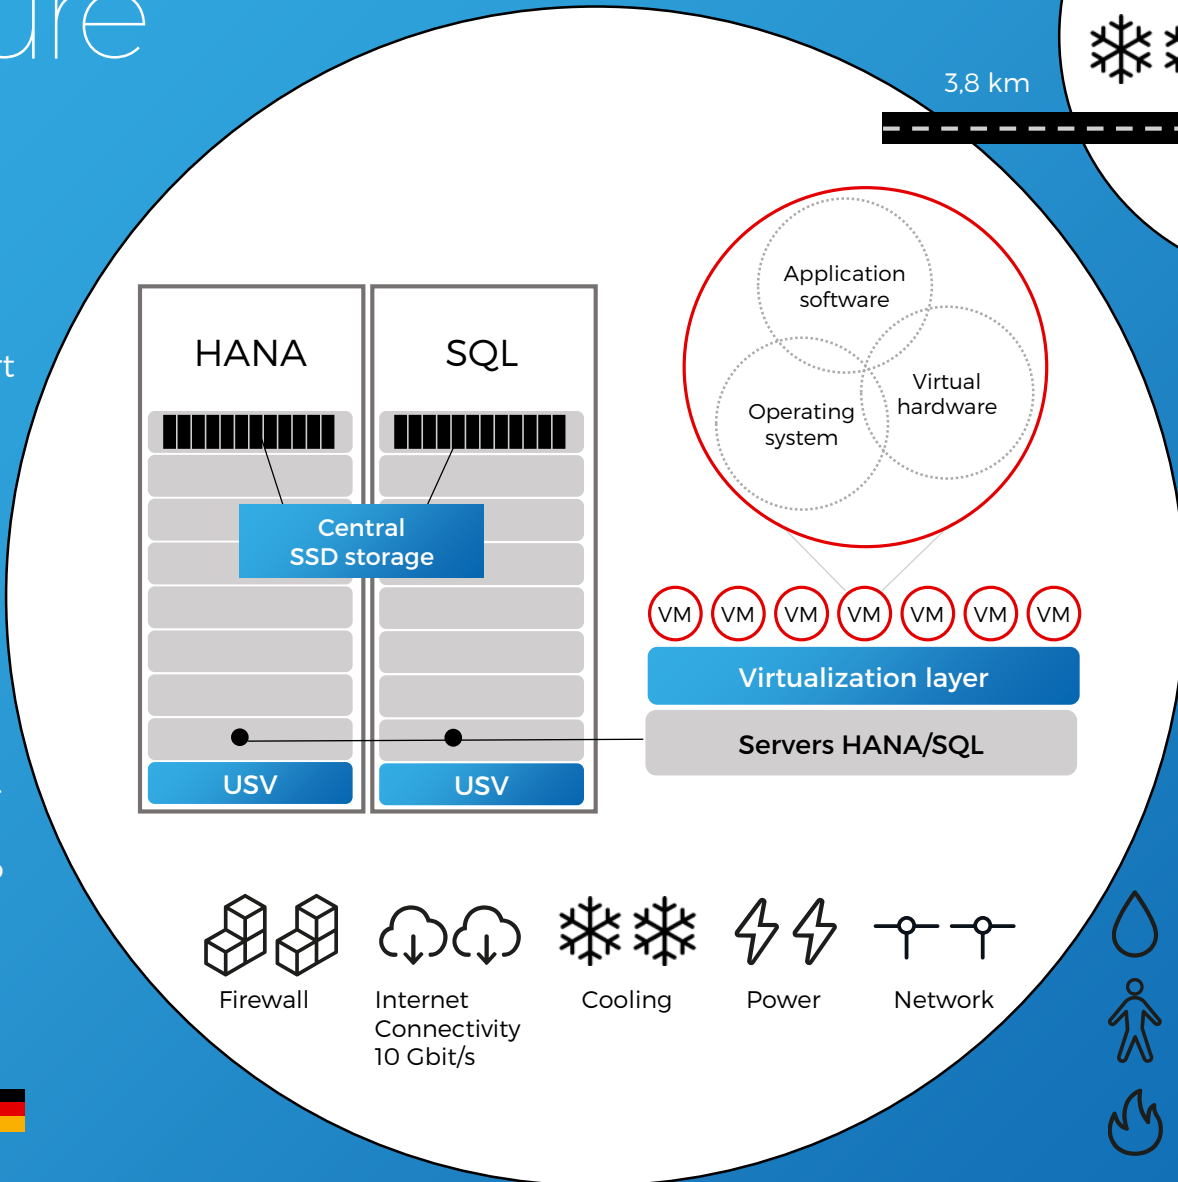

Clouディア already migrated more than 1000 databases to the cloud. With our many years of experiences and expert employees, it can't be easier to migrate to the cloud.

distribution of task iaas vs. paas vs. clouদিax

Full managed Services by Clouদিax							
PAAS Services e.g. Portugal Telecom				IAAS Services e.g. Amazon			
Access	Security	Additional applications	Applications e.g. SAP B1	Database	Virtualization	Hardware	Data center Tier 3
Fastest access to the Clouদিax network and datacenters	Firewalls, Active directory, SAP Cloud Control Center, Virus protection, Backup, Access systems, Reverse proxy, VPN etc...	Additional managed application SSP solutions and add-ons, II-Server, Portal-Server, Web-Services, etc...	SAP Business One Web client / 'n' managed Terminal-Servers with SAP Business One	HANA#1	VMWare virtualization	'n' dedicated HANA certified-64 Dell Servers	Space, power, cooling, internet connection, etc. (all redundant)
				HANA#2			
				HANA#n			
				'n' SQL Server instances	Microsoft Hyper-V Cluster	'n' Hosts x64 Dell Servers and Dell SSD Storage
