HANA 32 GB	1,050.00	750.00	600.00	environment
HANA 64 GB	1,890.00	1,350.00	1,080.00	environment
MS SQL	490.00	350.00	280.00	environment
Consultancy				
Technical consultancy** ^{New}		125.00		hour
** no discount				

Customer volume-discount

	Extra Discount ^{New}
Customers with 50 or more users or devices	10%
Customers with 100 or more users or devices	20%

The customer volume-discount will be applied to the exact day.

Terms and conditions

Flex plan

monthly upfront payment, term of the contract 1 month, automatically extended by 1 month if the contract is not canceled at least 1 months before the end of the contract.

Base plan

quarterly upfront payment, term of the contract 1 year, automatically extended 1 year if the contract is not canceled at least 3 months before the end of the contract.

Profit plan

annually upfront payment, term of the contract 1 year, automatically extended 1 year if the contract is not canceled at least 3 months before the end of the contract.

Explanations

Cloudiax platform

Cloudiax is a fully managed cloud platform for SAP Business One on MS SQL and SAP HANA. The datacenters are [ISO / IEC 27001: 2013](#) certified, work under [Tier-3 security standards](#) and with first class internet hubs, to guarantee the fastest access to SAP Business One.

Database Server

- A productive and a test database. Additional databases can be provided on request.
- Windows Server license
- Database License SQL and HANA (depending on license) - standard in the offering
- SUSE Linux Enterprise Server license for the HANA environment

Terminal Server

- Windows Server license
- Terminal Server licenses - standard in the offering
- SAP Business One client installed - licensed by the partner

Services

- System updates (operating systems & databases)
- SAP Business One updates, minimum 1x per year
- Security (firewall, anti-malware protection, user authentication, etc.)
- Tier-3 security level and ISO 27001 certified data center

Backups

- Daily backups, saved for 30 days

Storage

- The customer gets all storage to operate his SAP Business One system.

Summary

- No setup costs
- From 1 user up
- MS SQL and SAP HANA the same price
- Both RDP and Web client
- System updates & upgrades included
- All main SSP solutions ready-to-run
- SAP Business One add-ons included
- Enterprise quality IT landscape

Note:

The license price for SAP Business One is not included in Cloudiax Basis.

Cloudiax Basis

User

A Cloudiax Basis User is for a named SAP Business One user that has access through RDP or Web Access (Presentation Server). The standard SAP Business One mobile app can be included for this Cloudiax Basis user.

Device

A Cloudiax Basis Device is for a specific device like a production terminal, cash register or warehouse scanner that has access through RDP or Web Access (Presentation Server). This means more people can use 1 device.

Basis includes the following features

- Cloudiax infrastructure
- RDP and SAP browser access
- SAP Business One (Partner licenses)
- MS SQL Studio & SAP HANA Studio (only via Partner environment)

All following components can be included without extra costs

- SAP & SSP add-ons (Partner licenses)
- MS SQL or SAP HANA
- Crystal reports designer
- Crystal reports run time
- Productive databases (no restriction) with test database for each productive database
- BIIF & HANA Service Layer
- HANA Xtreme Apps and DI-API
- SAP Business One Mobile App for Android & IOS (not the new IOS sales app)
- Data Transfer Workbench

SLA

- Standard SLA applies to this environment

Services

- Daily backups, saved for 30 days

Cloudiax data center security level

ISO / IEC 27001: 2013 certification

What is ISO/IEC 27001?

ISO/IEC 27001 is an internationally recognized best practice framework for an information security management system. It helps you identify the risks to your important information and put in place the appropriate controls to help reduce the risk.

What are the benefits of ISO/IEC 27001 Information Security Management?

- Identify risks and put controls in place to manage or reduce them.
- Flexibility to adapt controls to all or selected areas of your business.
- Gain stakeholder and customer trust that their data is protected.
- Demonstrate compliance and gain status as preferred supplier.
- Meet more tender expectations by demonstrating compliance.

Cloudiax Options

Cloudiax Mobile User

The Cloudiax mobile user is needed for external users to access the SAP Business One database through the DI-API, Service Layer or Bli. E.g. the SAP Sales App for IOS or external CRM applications per user.

Cloudiax Mobile Device

The Cloudiax mobile device is needed for external users to access the SAP Business One database through the DI-API, Service Layer or Bli. E.g. an external POS solution.

Application / web server

The application / web server is used for portal application-systems, websites and e-commerce systems that need to be linked with SAP Business One. This might be, for example, a Microsoft IIS server, or if you run your own online shop that exchanges data with your SAP Business One environment. The number of users on the portal and web server is not limited. Pricing is based on the amount of RAM needed for the web service. With the Application / Web Server, the required backend integration and database for this service is included so is not charged extra.

Cloudiax and printing

Cloudiax basis supports the RDP and web client printing functionality and is completely sufficient for 90% of your customers. If your customer needs more functionality, advanced printing or IoT server can be an option.

Advanced printing powered by ThinPrint

Cloudiax print engine offers all core features of the advanced print technology. Highlights include:

Driver Free Printing

One virtual printer driver, the Output Gateway, replaces all printer drivers on the printing server or desktop.

Advanced Adaptive Compression

Intelligent compression process that adapts to the print job content and the available bandwidth and reduces print data by up to 98%. The results are fast printing and no more bandwidth congestion because compression is applied at every point and with all protocols. Compression anywhere the Output Gateway virtual driver is used, without additional software installation. This enables the compression from a PC in a branch office to the central print server, for example.

SSL / TLS encryption

Transmission of print jobs with 128-bit encryption and reliable protection of highly sensitive documents. The software integrated into the hardware allows end-to-end encryption right to the printer.

Automatic printer mapping by AutoConnect

AutoConnect ensures that the desired printers are always available to users in RDP sessions or to those working on virtual or physical desktops.

Advanced IoT server

The IOT server connects your local network directly to the Cloudiax infrastructure. This allows exchanging data directly between the Cloudiax network and the customer network. You can connect local machines to the cloud environment and exchange machine data. E.g. connect cameras.

Office 2016 Standard

The MS Office 2016 applications (Word, Excel, PowerPoint and OneNote) for the Cloudiax user on the terminal server.

SAP Bli Integration framework

Bliif is used to connect SAP B1 to its eco system. Therefore, the main task for Bliif is to enable SAP B1 to publish/send data to external systems and to allow SAP B1 to consume/access data from external data provider. Another aspect of introducing Bliif is to consolidate certain client functionality to run these on server side and herewith having one single platform to perform all integration related tasks.

Site-to-Side VPN

A site-to-site VPN allows offices in multiple fixed locations to establish secure connections with each other over a public network such as the Internet. Site-to-site VPN extends the company's network, making computer resources from one location available to employees at other locations. An example of a company that needs a site-to-site VPN is a growing corporation with dozens of branch offices around the world.

Development Environment

HANA 32 / 64Gb

Develop on your own dedicated HANA environment. All the necessary tools and applications for development are included. You can choose between 32 or 64GB RAM.

- HANA system
- Terminal server system
- SAP Business One (without SAP Licenses)
- HANA Studio
- SAP Data Transfer Workbench
- HANA Service layer
- HANA Xtreme Apps
- UI5 / Fiori

SLA

- No SLA applies to this environment

Services

- Backup

MS SQL

Develop on your own dedicated SQL environment. All the necessary tools and applications for development are included.

- SQL system
- Terminal server system
- SAP Business One (without SAP Licenses)
- SQL Management Studio
- SAP Data Transfer Workbench

SLA

- No SLA applies to this environment

Services

- Backup
