CLOUDIAX | cloud platform for sap business one

security manager authorization

Full company name

First name

Last name

E-mail

Phone number with international prefix

Signature

The security manager is your responsible person for changes, authorizations and actions within your and your customers cloud environment. He/she creates employee logins to access to the Cloudiax service portal: https://portal.cloudiax.com. The security manager can also log tickets in the system. When a security manager also has other roles, he/she should have just one login. A login email must be personal. Please do not use e-mails as support@... or a direct link to your own ticket system.

Please note
If you change the security manager in your company, you should inform us and send us the contact details of the new security manager.

Please sign this form and send it to order@cloudiax.com

The personal information you send is important to us. Therefore, we take the protection of this data very seriously. The data transmitted here will be used for our common future cooperation. We will use this data only for this purpose and delete it after the end of the contract, as far as no higher law precludes this. Everything that we do to protect your data with us, you can read in our privacy policy.
